Turkish GB treebank

Cagri Coltekin

The Turkish GB treebank consists of 2880 sentences and phrases from grammar book examples. The motivation for the treebank was to set up first UD guidelines for Turkish. The choice of the grammar book examples increases the diversity and coverage of the morphosyntactic constructions with a relatively small number of short sentences. In this talk I will briefly introduce the treebank, and focus on some of the annotation choices I am (still) not happy with, or have been questioned by others. These topics include:

- Some of the segmentation decisions
- Complex morphological features
- Annotation of copular constructions, and in particular their negation with `değil'
- Question particle
